

BOYTEKS

- **Industry :** Furniture
- **Number of Employees:** 1,470
- **Head Office :** Kayseri

Drawing attention with its production quality and technology, Boyteks is the supplier of major corporations in furniture, home textile and carpet weaving industries. Boyteks aligns its production processes for İstikbal, Bellona, Mondri and Deco with the expectations of its customers.

Solution:

- SAP ERP

Highlights:

- SAP ERP project was performed in Boyteks that operates in two different business areas, namely home textile and carpet weaving. The project started with the financial scope and consequently an end-to-end integration was achieved in the carpet weaving section.
- As one of the leading projects in Turkey in the field of carpet weaving, Boytek's SAP Project also included a successful implementation of we@velink integration.
- With scale integration, actual consumption in production phase has become healthier.

Benefits:

- Thanks to the integration with the we@velink program, operational processes such as bench planning, loading production schedule to benches and transferring production notifications from benches to SAP are successfully managed.
- Error notifications detected with handheld terminals during the production are recorded by the quality control module.
- Thread bobbins are monitored for each carpet on the basis of address and serial number.
- With handheld terminal applications and implementation of storage unit monitoring per carpet, processes have become faster and more traceable.
- Location-based stock tracking has been achieved.
- A web portal through which main dealers can monitor the status of their orders has been established.
