

it.x-press: Making Shipping and Logistics Processes Easier

Automated Shipment Processing in SAP ERP and SAP S/4HANA

Challenges

Does this sound familiar to you?

- Do you have a high mail volume?
- Do you work with different courier, express and parcel (CEP) service providers and forwarding companies?
- Do you believe that customer satisfaction can be achieved only with optimal logistics?
- Do you want to provide your customers with more transparency for your shipment?
- Do you want to establish an electronic interface with your transport service providers because that's what they expect?

it.x-press for Automated Shipment Processing in SAP ERP and SAP S/4HANA

it.x-press is a software for electronically integrating CEP service providers and forwarding companies to enable automated shipment processing in SAP ERP or SAP S/4HANA. A technical interface with your service providers is established via the integration components SAP NetWeaver Process Integration / Orchestration or the it.x-Connect module.

it.x-press can be supplemented with a range of additional, optional extensions including the packing table module, scales adapter, freight charge and hazardous goods module, the EWM interface as well as sanctioned-party list screening. If desired, these can be integrated in the process.

More than **100**

different transport service providers integrated in the standard it.x-press system

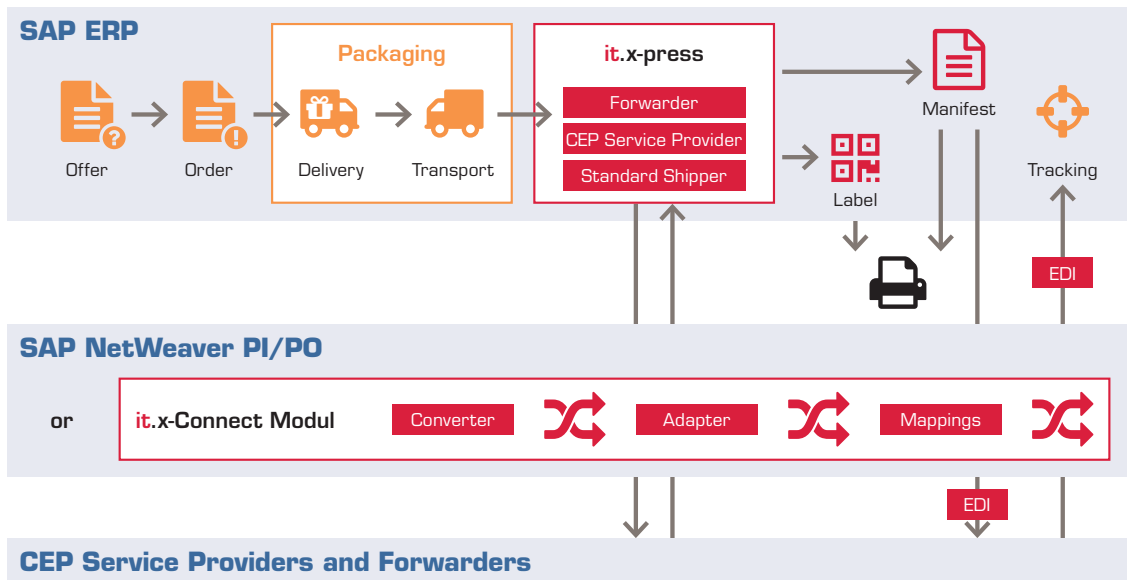

Benefits include the fact that we need fewer people at the shipping point, can increase daily output by around 10 percent and experience fewer errors because everything is now mapped in a single system.

10%
higher daily output
and fewer errors

it.x-press: Functions and Technical Connection

Key Features of the it.x-press Core Module

- Placement and cancellation of shipping orders
-> shipping-relevant data is extracted from the ERP, specially prepared and sent to your transport service provider;
- Shipment tracking -> comprehensive tracking at handling unit level in the SAP system;
- Fulfillment of legal requirements regarding confirmation of arrival thanks to integrated tracking information and delivery receipts;
- Reporting tools -> a range of reporting features for more transparent shipping;
- Shipping notification -> personalized email to customers containing a link to the service provider's tracking portal;
- Search logic for transport service providers -> customer-specific set of rules.

Your Advantages

Consistent and Optimized Logistics Processes

Thanks to the seamless integration of your transport service providers in your SAP system, you can ensure consistent logistics processes from a single system and eliminate media disruptions.

Competitiveness

Since all services and options offered by the service providers are available in SAP, you can not only speed up your shipping processes but also choose the best service provider, in turn boosting your competitiveness.

Customer Satisfaction

Shipping notifications and shipment tracking services enhance customer satisfaction and strengthen your brand.

Transparency

Comprehensive reporting functions such as delivery statistics and transit times create additional transparency.
