your production line into the fast lane!

itelligence NTT DATA Business Solutions

With it.automotive supplier, your standard is perfection

Set standards with your service – as well as your products!

»it.automotive supplier provides you with a fully integrated SAP solution to plan, control and monitor your logistical business processes end-to-end. The entire logistics chain is supported – from pre-production orders and sales orders dispatched by EDI through to production planning and control.«

itelligence AG, Bielefeld

Cross-business collaboration, short development times and fast communication paths are the basis for success in the automotive industry. Manufacturers, system and component suppliers, development partners and retailers work closely together in a strongly networked system. This is the only way they can respond quickly to customer demands and market tendencies.

In the automotive industry, added value starts with the supplier: Seamless logistics processes, a strong network with the customer and supplier market and high quality demands present a great challenge for decision-makers in the automotive industry.

Manufacturers and suppliers can only meet the requirements of the industry and the market with a high-performing, reliable and innovative software solution. The tried and tested industry

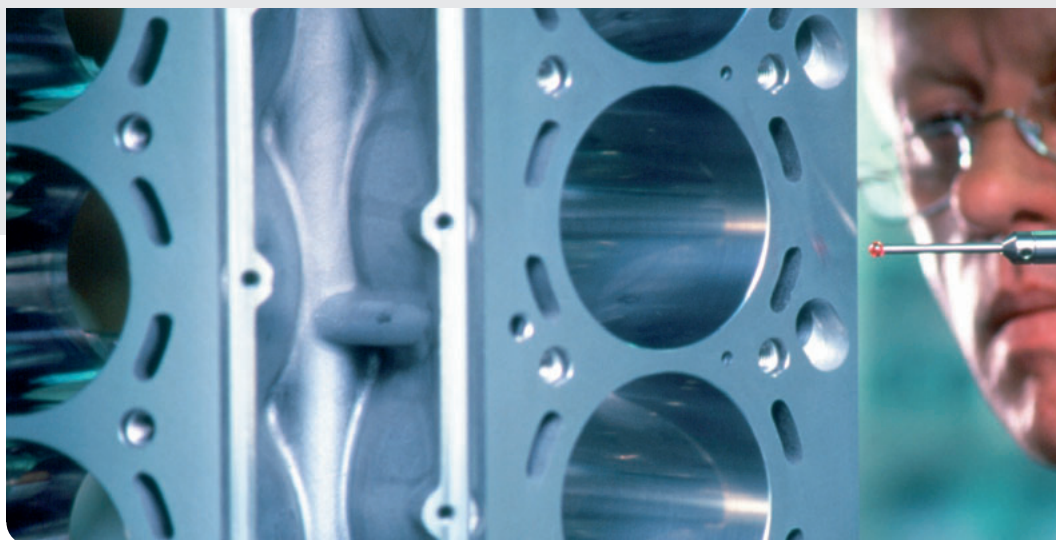

solution it.automotive supplier from itelligence, based on SAP Business All-in-One, was developed specially to meet these demands. It integrates the processes and functions of manufacturers, suppliers, retail and service, and provides special functions for the specific requirements of individual areas. The system thus forms a technological platform for end-to-end information processing – from manufacturers' material delivery schedules and subsupplier integration through to product delivery to the customers.

Together, we will master the demands of your industry. it.automotive offers you support for:

- A range of different production procedures (Kanban, JIT, etc.)
- Container logistics with barcode and scanner integration
- Quality management for the complete product life cycle and all logistics processes
- Efficient processing of forecast and JIT delivery schedules with information on cumulative quantities
- Generating and managing product data throughout the entire life cycle of a product
- Creating and managing tools
- Your range of variants
- Speedy responses to shortened development and delivery times, as well as product life cycles
- Your international presence

In the past, a car consisted of 800 parts. These days, there are more parts in the air conditioning alone.

In vehicle construction, precision is key – in production and delivery.

The goal: satisfied customers.

The path: process optimisation.

it.automotive supplier supports all the relevant processes in your company.

The special technical and business features of scheduling agreement processing are covered by the it.automotive standard solution. The common EDI standards in the automotive industry, such as UN/EDIFACT, ANSI X.12 and VDA or ODETTE, are fully supported, enabling a smooth data transfer and thus production-optimum supply processes.

With our solution, we supply extensive presettings and documentation to meet your demand for an optimised, fast implementation.

These include:

- Methodology: easy to understand and comprehensive
- Business scenarios with master data and flow data, directly executable processes in the project work
- Detailed project and user documentation
- User roles for the key work centre descriptions
- Data specifications and proposals for the data transfer
- Test catalogues for customer-specific function and integration tests
- Proposals for the most commonly used forms

Forecast, JIT and sequenced delivery schedules are available, as well as a range of different production procedures. The warehouse organisation for production, raw materials and produced goods is optimally supported by the integration of a warehouse management system. The manufactured goods are packed automatically according to packing instructions and provided with customer-specific or neutral barcode labels. Customer-specific packaging is managed as returnable packaging.

»With it.automotive supplier, you save money in the right places. Because time is the most costly material of all.«

In addition, it.automotive supports the generation and management of product data during the product life cycle. This includes the development process with project and control plans, toolmaking and costing, series processing with change management and document management through to production and discontinuation when products change. Quality management ensures holistic control and planning.

Even during the development process, elements such as APQP and the control plan are realised and then passed on as far as the production line check. In the logistics area, there are checks for the goods receipt, production and goods issue.

Our experience shows that every industry has its own specific IT requirements, owing to their different processes. This is why at itelligence, IT and industry specialists work in close collaboration to produce your solution.

itelligence SAP Business All-in-One industry solutions are preconfigured for the typical business processes of a specific industry, thus enabling costs and implementation times, in particular, to be radically reduced. Other benefits include almost unlimited scalability and a high level of flexibility, as well as increased productivity and cost control.
