A Natural TRANS/4MATION: SAP S/4HANA System Conversion

For forward-thinking businesses, making the switch to SAP S/4HANA is only a matter of time. However, to ensure a smooth transition, it is important to know all the phases of conversion and the available tools and solutions. If you are considering an SAP S/4HANA system conversion, this simple infographic can guide you through the journey.

Phase 1: Discovery
Before you start preparing your SAP S/4HANA requirements, it is essential to define the scope and business needs of your company. The Maintenance Planner solution can help you address the future scope of the system and how you want to use it. Itelligence can help you define your roadmap with consulting services, SAP S/4HANA trial versions, and proof of concepts.

Phase 2: Preparation
Once you know the system requirements, the actual preparation can begin. SAP offers a number of tools for support. These include the Maintenance Planning solution, which checks your industry solutions and add-ons, a Simplification List to facilitate your planning, and the Custom Code Migration Worklist. In addition, the Readiness Check helps you understand exactly how SAP S/4HANA will affect your business.

Phase 3: Realization
Finally, the conversion can begin. Key tasks include migrating to the SAP HANA database, updating software to the latest versions, and converting data to the new data model. The Software Update Manager supports you with these processes. Once complete, you may need to carry out application-specific follow-up activities, such as configuring new SAP Fiori apps or implementing cloud extensions.

If you need additional advice and support for your SAP S/4HANA conversion, simply contact itelligence to arrange a consultation session. Our experts can support you in all three phases of implementation - ensuring a smooth transition to the next-generation business suite.
