

## BPC Solutions from itelligence

# STREAMLINE, AUTOMATE AND OPTIMIZE BUSINESS PLANNING PROCESSES

SAP Business Planning and Consolidation (BPC) is a robust planning and consolidation application designed to meet organizations' complete budgeting, planning, consolidation and reporting requirements. Utilizing an Excel interface, the tool allows finance organizations to eliminate manual steps and more quickly and accurately pull financials from international subs, perform currency translation, intercompany eliminations, make top-side entries, and perform statutory/IFRS, GAAP, and management reporting.

With SAP BPC, an organization's analysts will have more time to analyze information instead of spending time compiling data. As a result, the

organization can also become a more agile business capable of providing timely information to the right people to empower better decision making.

### itelligence SAP BPC Implementation Services

When businesses partner with itelligence for BPC implementation projects, we utilize a combination of process improvements, technology and best practices—including planning, forecasting, reporting, analysis, consolidation and tax—to create solutions that enable our clients to drive strategy and positively affect their business performance.

**About itelligence** itelligence Inc. is a wholly owned subsidiary of itelligence AG, an international full-service solution and consulting company with a global presence in 22 countries. itelligence provides a broad range of consulting and customer support services to further maximize SAP solutions, including implementations, business intelligence, application management services and hosting. itelligence is an SAP gold channel partner authorized to resell SAP Business All-in-One and SAP BusinessObjects® solutions, an SAP global services and SAP global hosting partner, and an SAP-certified global provider of application management services. itelligence also holds global quality accreditation by SAP Active Quality Management organization for demonstrating clear quality standards and processes. For more information please visit <http://www.itelligencegroup.com>.

Our knowledge transfer approach to implementation—coupled with our consultants' years of both industry and consulting experience—assures long-term success for our clients. Before we even begin the implementation, we examine and evaluate each client's business processes in order to develop a solution specific to that organization's goals and objectives.

And, we don't just build an application for clients. When the project is complete, our clients know how to use and manage the solution themselves because they are actively involved throughout the project. This collaborative effort helps to ensure a completely self-sufficient application environment and enables an organization to adapt the application to their business needs. After we transition the new system to a client, we stand ready to help at any time. We are committed to creating success for our clients by ensuring the solution accomplishes the expected results.

### **SAP BPC Training**

It is critical for the end-user community to embrace the new system. Our team of qualified training consultants provides comprehensive instruction that emphasizes the best practices and experience we have gained from more than 500 successful SAP BPC projects.

### **Remote Services and Support**

Our relationship with clients does not end when we transition a new system. Instead, we stand ready to help each client at any time, and we are committed to ensuring new solutions accomplish the results our clients set out to achieve. Our BPC Remote Services offering is designed to help SAP BPC customers with their BPC administration needs. Whether an organization needs help troubleshooting a single problem or a stop-gap admin solution until an internal hire is made, our post-implementation support ensures clients receive the right amount of help when they need it.

### **Upgrades**

Current SAP Business Planning and Consolidation users naturally want to optimize their investments. By upgrading solutions, our clients will reduce processing time, increase security, improve performance and gain more control with the business process flow (BPF) technology. Our proven upgrade methodology combines a process-oriented approach with a focus on execution, resulting in a faster time to deployment. And we understand a truly successful implementation delivers value beyond the software application.

Finally, we help clients maximize their upgraded solution through a holistic approach customized specifically to each organization's goals and objectives. Our Upgrade Assessment and Blueprint includes an analysis of clients' current SAP BPC solution and delivery of a detailed plan documenting recommendations for leveraging their upgrade.
